Yellow team

Food Fair Thought

Amazing Restaurants At Fair Prices

FoodFairThought.com

Project Description

- The final product will be a platform for those looking for a place to eat and want to find the best deals. The platform explains itself as:

“The whole year ‘restaurant week’ season”

“The Priceline for restaurants”

User Story

- **Project 1 - Restaurant Generator:**

- The user hasn't decided which restaurant to go to, so he uses the app to determine for him. He trusts Food Fair Thought because the platform brings only restaurants under his criteria, and he knows the app will choose something around his neighborhood, depending on the distance he wants.
- He then has the option to select the type of place he wants to go. He can also establish the level of price he wants to pay. Running the choice randomly, the app will bring him the selected restaurant. If he doesn't like it, he hits the button again and waits for the new restaurant.

- **Project 2 and Project 3:**

- He will be able to bid on restaurant prices (for dinner, lunch, and brunch), and wait for the platform to bring the selected restaurant (based on the criteria chosen – price, location, rating, and type).
- If he agrees to know the name of the restaurant, he will have to pay for the food package in advance. The package will have a substantial discount.

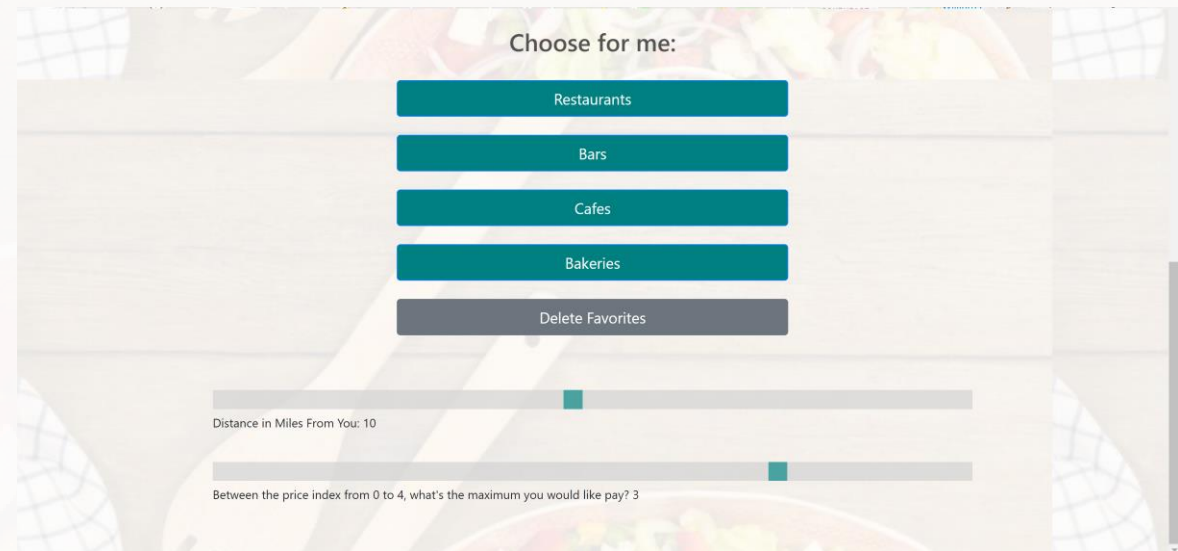

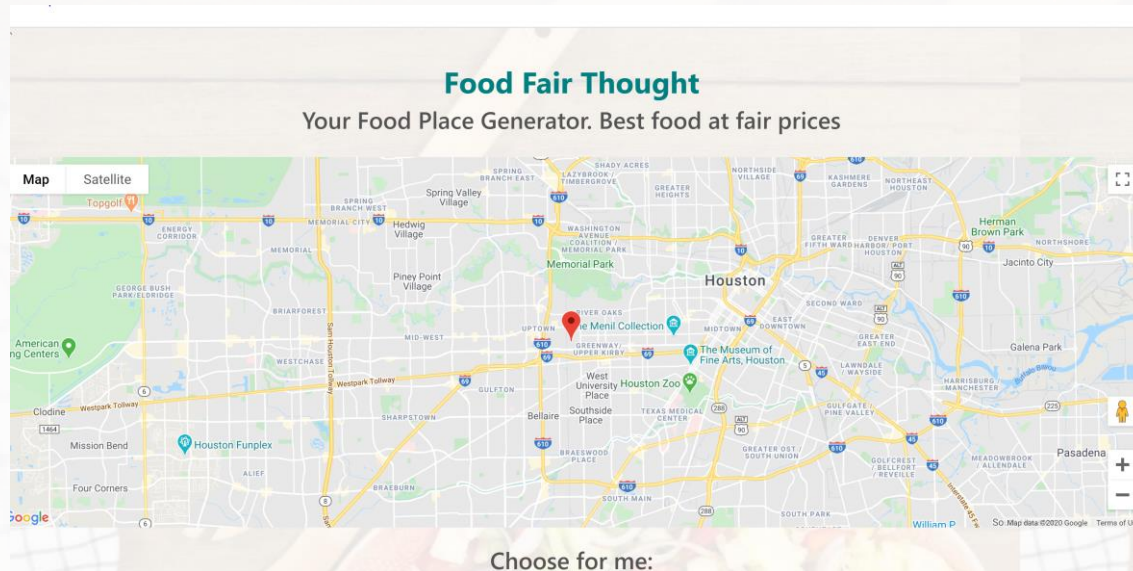

Food Fair Thought Description: Project 1

- The user will have the possibility to choose:
 - Distance;
 - Level of price \$\$\$,
 - Type of Food (which will limit many of their options).
- In the MVP presented in this first project, the platform will then filter a set of restaurant, and within this filtered list, and it will choose a restaurant randomly that this user would go. All restaurants will respect user's chosen criteria.
- The list will bring the name of the restaurant, the address, the phone number, the rating, and the type of place (restaurant, bakery, café, and bars).
